Art Unit: 3641

DETAILED ACTION

Claims 1-17 have been canceled.

Information Disclosure Statement

The listing of references in the specification is not a proper information disclosure statement. 37 CFR 1.98(b) requires a list of all patents, publications, or other information submitted for consideration by the Office, and MPEP § 609.04(a) states, "the list may not be incorporated into the specification but must be submitted in a separate paper." Therefore, unless the references have been cited by the examiner on form PTO-892, they have not been considered.

Specification

The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claim 18 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Art Unit: 3641

The recitation “thin” in line 2 is indefinite since “thin” is a relative term and it is unclear as to exactly what “thin” is supposed to be.

The recitation “the radius through the center of said lug” lacks proper antecedent basis.

Claim Rejections - 35 USC § 103

Claim 18 is rejected under 35 U.S.C. 103(a) as being unpatentable over Pohr in view of Bond et al.

Pohr shows a steel disk 10 with protruding lugs 20 and a centrally located mounting means (adjacent 11).

Claim 18 distinguishes over Pohr in requiring (1) the lugs to be bent at right angles to the rotating plane of the disk and (2) the dimensions for the lugs and spacings noted.

With respect to (1), Bond et al. show lugs 3 bent at right angles to the rotating plane (unnumbered) of the disk 2.

It would have been obvious to one of ordinary skill in the art at the time the invention was made to have made the lugs 20 of Pohr bent at right angles to the rotating plane as shown in Bond et al. for deeper lug penetration.

As to (2), the selection of specific dimensions for the lugs and spacings noted merely represents an obvious choice of engineering design to one of ordinary skill in the art at the time the invention was made for optimum performance, stability and penetration of the device.

It would have been obvious to one of ordinary skill in the art at the time the invention was made to utilize the dimensions noted for the lugs and spacings noted for the reason noted.

Response to Arguments

It is to be noted that no arguments have been presented in response to the last Non-Final Office Action dated March 31, 2005.

Applicant should submit an argument under the heading "Remarks" pointing out disagreements with the examiner's contentions. Applicant must also discuss the references applied against the claims, explaining how the claims avoid the references or distinguish from them.

Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
